Benefits of Case Management in First Responder Diversion Programs
The justice system can divert many people to treatment and services in the community.
Why First Responder Diversion?

Incarceration DOES punish people and can remove dangerous people from communities

BUT:
• Incarceration often does not address rehabilitation needs of the person, the family, or the community

SOLUTION:
First Responder Diversion:
• Increased public safety
• Reduced recidivism
• Reduced costs
• Reduced social service burden on law enforcement
• Increase use of community-based treatment and housing services
• Keeps families intact
• Connecting children with care to address trauma
The Five Diversion Pathways to Treatment

- **Self-Referral**: An individual voluntarily initiates contact with a first responder (a law enforcement, fire services, or EMS professional) seeking access to treatment (without fear of arrest) and receives a referral to a treatment provider.

- **Active Outreach**: A law enforcement officer or other first responder identifies or seeks out individuals in need of substance abuse treatment; a referral is made to a treatment provider, who engages them in treatment.

- **Naloxone Plus**: A law enforcement officer or other first responder engages an individual in treatment as part of an overdose response.

- **Officer Prevention Referral**: A law enforcement officer or other first responder initiates treatment engagement, but no criminal charges are filed.

- **Officer Intervention Referral**: A law enforcement officer initiates treatment engagement; charges are filed and held in abeyance or a citation is issued.
Components of Specialized Case Management
What Is Specialized Case Management

Clinically-focused, multisystem service coordination with treatment placement and recovery management to create a unique client service approach
Without Specialized Case Management:
Disconnected services create chaos for courts, confusion and barriers to recovery for clients

CHALLENGES
• Justice system access to services is chaotic and incomplete
• Disconnected services in community
• Inefficiency & wasted costs
• Barriers to treatment for courts and clients
• Limited access to needed recovery supports
• Confusion for clients and families
• Clients incarcerated more, deprived of rights to treatment
• Clients who reach treatment have poorer outcomes
Traditional Case Management Silos

• Justice System:
  • Track completion of court expectations
  • Can include victim restitution, payment of court costs/fines, completion of community services, satisfaction of terms of supervision (drug screens)

• Health System:
  • Placement into appropriate level of care
  • Progress on treatment plan
Specialized Case Management – System Coordination
Addiction Recovery Over Time

1-12 Months
- More abstinent friends
- Less illegal activity and incarceration
- Less homelessness, violence, and victimization
- Less use by others at home, work, and by social peers

Longevity of Recovery
1-3 Years
- Virtual elimination of illegal activity and illegal income
- Better housing and living situations
- Increasing employment and income

4-7 Years
- More social and spiritual support
- Better mental health
- Housing and living situations continue to improve
- Dramatic rise in employment and income
- Dramatic drop in people living below the poverty line

The Pathways to Treatment
The TASC Model

A Way of Connecting Different Systems
Specialized Case Management

**Criminal Justice Support**
- Identification of people with drug problems
- Service matching to risk and need
- Service placement and monitoring
- Enhancing community safety

**Treatment Support**
- Changing individual behavior
- Reducing drug use
- Accountability and leverage to ensure treatment participation
Measures of Individual Success

- Treatment Completion
- Stable Housing
- Education/Employment
- Substance Free
- Recovery Plan
- No New Charges
Supporting Recovery: Address Social Determinants of Health

• Housing
• Employment and Education
• Social Supports (e.g., transportation, childcare)
• Physical Health
• Safety/Environment
• Peer-based and Community-based Supports
• Restorative Justice (i.e., reconciliation with victims, community)
Specialized Case Management
Significantly Greater Success in Treatment Completion

- Gray: Individuals referred to treatment by IL criminal or juvenile justice systems
- Dark: TASC criminal/juvenile justice clients receiving treatment

BJA’s Comprehensive Opioid, Stimulant, and Substance Abuse Program
First Responder Diversion and Case Management In Practice
Elements of the Naloxone Plus Pathway

- **Naloxone Plus**: Engagement with treatment as part of an overdose response with naloxone, then following up rapidly with tight integration with treatment. Site examples: QRT, DART, STEER
  - **Naloxone** – Law enforcement, fire, emergency medical services, community, businesses, individuals, etc.
  - **Rapid ID** – e.g., 9-1-1
  - **Immediate contact with individual** – as close as possible to point of OD
  - **Rapid engagement** – in person and daily follow-up until engaged in treatment
  - **Rapid access to treatment** – measured in minutes and hours
  - **Screening and clinical assessment** – to have the correct individual approach
  - **Continued tight integration** – police and behavioral health and community
  - **Medication-Assisted Treatment (MAT)** – all appropriate medications made available
  - **Recovery support services** – treatment ends, recovery continues
  - **Naloxone** – for the individual and his/her household
What is a Quick Response Team (QRT)?

• Naloxone Plus overdose response
• Multidisciplinary team (police, fire, treatment, peer support)
• Identify and locate OD victims
• Onsite assessment and recovery plan implementation
• Naloxone distribution
• Follow up and support
Cabell County, WV

- West Virginia led the nation in per capita OD deaths
  - 2015: 480 calls for a suspected OD; 298 Narcan usages
  - 2017: 1,831 calls for a suspected OD; 1,153 Narcan usages
- 2018: EMS reported a 40% decrease in calls for a suspected OD from 2017 (QRT began)
- Total QRT encounters: 500+
- Individuals entered in treatment: 30%
